

Chew Chart™ for ARK Chew Tools

Options for everyone! Styles for both boys and girls, kids and adults. Whether you prefer smooth or textured, soft & chewy or firm & fairly rigid, chewing with your front teeth or with your back molars - there's an ARK chew for every preference.

	Chew Type	For front teeth chewing	For back teeth chewing (has an extension long enough to reach the back molars)	Textured (great for sensory seekers, realistic non-food biting/chewing practice, etc.)	For babies & toddlers	For older kids and/or adults	Longest lasting styles for avid chewing

ARK's Write-n-Bite® Topper	pen topper	✓	✓			✓

Almost all of the above ARK chew tools come in 3 color-coded toughness levels. We usually recommend going with the softest/standard by default. Unless the individual chews through things (chews holes in shirts, chews through pencils, etc.), in which case going up to the middle XT level would most likely be longer lasting. The toughest XXT level - some people find it too hard, so it's usually best not to start with XXT (unless the individual has already chewed through the XT level or other very hard items like legos, hard plastic toys, etc.).
